

# V6 configuration without V5 features

The configuration below show a minimal `nuts.json` config file:

- `did:nuts` disabled, `did:web` enabled
- discovery refresh of 1 minute for faster discovery during development
- default mappings for discovery and policy files (mounts required)
- SQLite will be used as DB
- gRPC network is started but without `bootstrapnodes`, `nodedid` config values or NutsComm addresses in DID documents, no connections will be made.
