

Access Policy

Anti-patterns

- **Bad:** "Clients can update the FHIR resource at /Task/ using an HTTP PUT, but only the status field. HTTP PUT is a replace operation, which requires the Policy Decision Point to verify whether delta of the update only updates the status field, which can't be performed atomically. Alternatively, it requires a use case-specific FHIR API, causing more implementation effort.
Better: "Clients can update the status field of FHIR resource /Task/ using an HTTP PATCH. Updates to other fields must be rejected"
